Insights

Potential sampling bias

180 events (18.37%) were dropped because the ingest queue was saturated; percentile and talker estimates may under-report true volumes.

Confidence 92.00%

Signal-to-noise imbalance

Only 0.00% of events matched the configured keywords; consider refining collection rules.

Confidence 78.00%

Dominant noise source

10.9.8.7 produced 70.0% of traffic. Investigate chatty services or enable sampling.

Confidence 90.00%
